

Newsletter

June 2020

Registered Charity Number: 11543263

From the Treasurer

Life is beginning to slowly return to normal for most people, but we also need to remember those who have lost loved ones during the pandemic and that we all continue to stay safe.

We have been busy supporting our families as much as we can during these difficult times. Angie (Amelia's mummy) has maintained constant phone contact with those families suffering from the enormous impact Neuroblastoma brings. Including young Mason from Rochdale, who is incredibly poorly at the moment – our love goes out to him.

In our May Newsletter we announced that we sadly had to cancel two of our main fundraising events of 2020, due to the pandemic – Our annual Ball and the Kilimanjaro climb. We are hoping that as we return to a more normal way of life, we will be able to share with you the new dates and details.

We, as always, would like to thank all our supporters for your continued support of our charity.

Best wishes

Samantha White
Treasurer

Dylan Dey

A fun loving 12 year old boy from Manchester, we are extremely sad to say, joined the angels at 3am on Saturday 30th May 2020.

Dylan was a real character who always had a smile for everyone. He loved wrestling, fast cars, building his football teams on

Fifa to play online and was an avid Manchester United support but most of all his biggest love was his beloved

family.

Dylan will always be a huge part of the Amelia-Mae Foundation and we will continue to support his family. He will be incredibly missed by each and every one of us.

Our love and thoughts go out to all of Dylan's family & friends.

Fundraising News

Fortress Energy Ltd will be raising awareness, collecting and requesting donations for our charity throughout 2020/21.

The Mine Warfare Battle Staff (White Watch) will be continuing to support us whilst on operations in Bahrain.

One of our supporters Arum Atkinson has produced some amazing short films for our charity; that offer our parents and families voice on their experiences. Take a look here:

What is Neuroblastoma?

Neuroblastoma is a rare type of cancer that mostly affects babies and young children.

It develops from specialised nerve cells (neuroblasts) left behind from a baby's development in the womb.

Neuroblastoma most commonly occurs in 1 of the adrenal glands situated above the kidneys, or in the nerve tissue that runs alongside the spinal cord in the neck, chest, tummy or pelvis.

It can spread to other organs, such as the bone marrow, bone, lymph nodes, liver and skin.

It affects around 100 children each year in the UK and is most common in children under the age of 5.

The cause is unknown. There are very rare cases where children in the same family are affected, but generally neuroblastoma does not run in families.
